RelayByte

Small apps.
Clear purpose.

Independent software by Kyle Reddoch · Texas

Daytona Startup Program · October 2026

The RelayByte approach

One clear job

Focused utilities for tasks people can understand.

Clear controls

Make permissions, choices and outcomes understandable.

Honest data handling

Explain what stays local and what the app connects to.

For example: Trayage reviews files locally, then lets the user confirm the action.

Trayage: review first, decide second

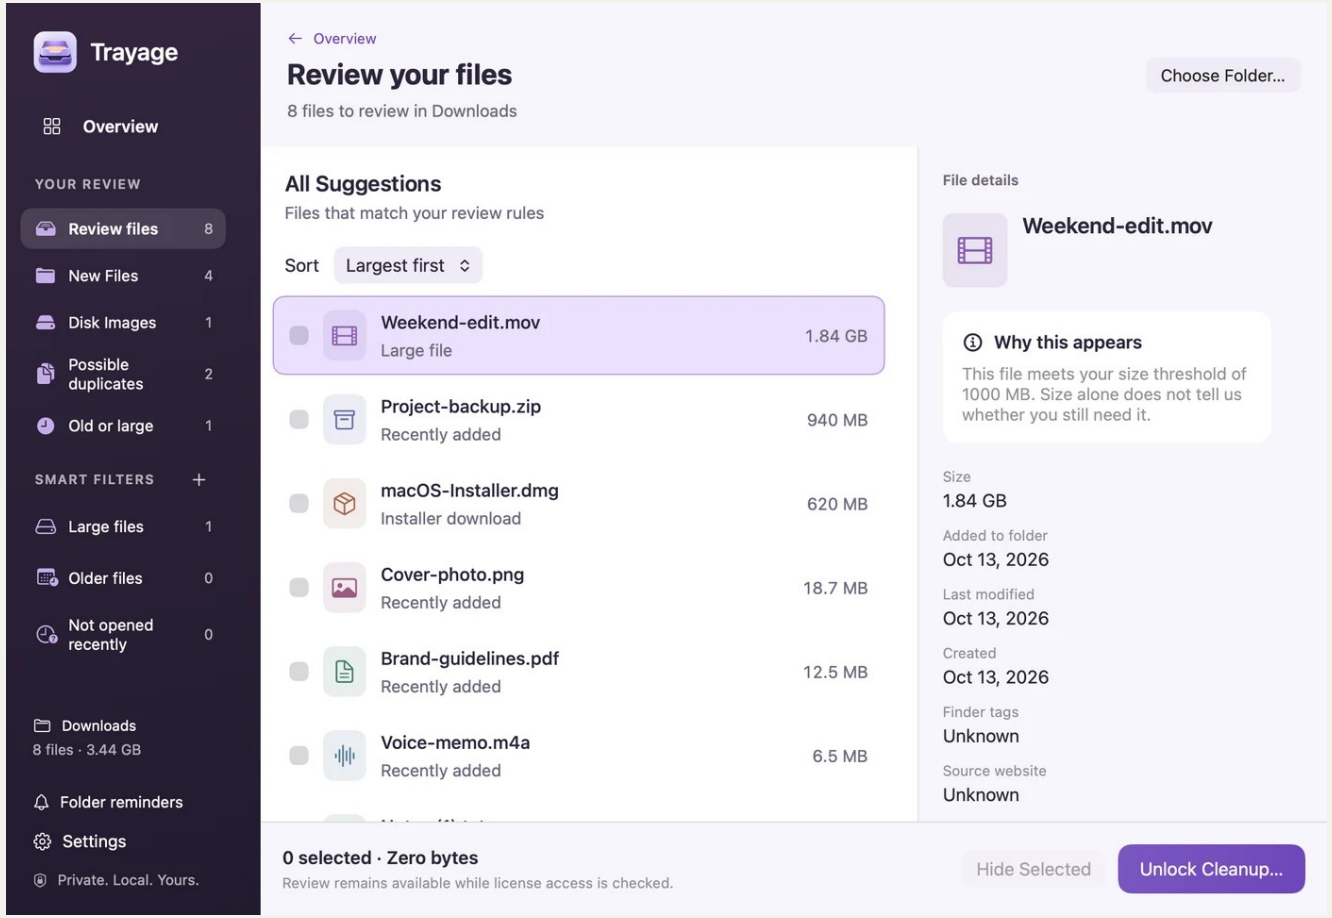

Native Downloads review for macOS 14+

See what is worth reviewing

Installers, possible duplicates and older files—with reasons for each suggestion.

You choose what moves

Confirm Move to Trash.
Trayage never empties Trash.

A simple paid-utility model

Trayage

US$9.99

once

Direct license

Up to 3 Macs

All 1.x updates

Review is free.

Try cleanup for 7 days, with no automatic charge.

Available directly and on the Mac App Store

Two more focused products

Drift

Available · Chrome extension

Selected passage + page title + link → editable Mastodon draft.

Free and open source.
No Mastodon password or API token needed.

StylePort

Available · Safari on macOS 14+

Install, edit and manage CSS and UserCSS, with settings kept locally.

Free and open source.
Direct download + Mac App Store.

Two intended uses for Daytona

Planned evaluation — not deployed

FIRST PHASE

Isolated AI-generated code and scripts

Run generated code in isolated environments; inspect outputs and keep human review before use.

CONDITIONAL SECOND PHASE

Testing RelayByte's Mac apps

Evaluate Mac-specific test workflows, subject to macOS access and credit eligibility.

Founder and request

Kyle Reddoch

Independent developer in Texas,
with a cybersecurity background.
