RelayByte

Small apps.
Clear purpose.

Independent software by Kyle Reddoch · Texas

relaybyte.dev

Focused apps for everyday friction

Trayage / macOS

Downloads get cluttered

Review accumulated files and decide what stays.

Drift / Chrome

Sharing loses context

Carry a passage, title and link into an editable Mastodon draft.

StylePort / Safari

Browser styles take work

Install, edit and manage custom styles in Safari.

One clear job. Understandable behavior. The user stays in control.

Useful software, understandable behavior

One clear job

Keep the product focused on a task people can understand.

Clear controls

Make permissions, choices and outcomes understandable.

Honest data handling

Explain what stays local and what the app connects to.

For example: Trayage reviews files locally, then lets the user confirm the action.

Trayage: review first, decide second

Native Downloads review for macOS 14+

See what is worth reviewing

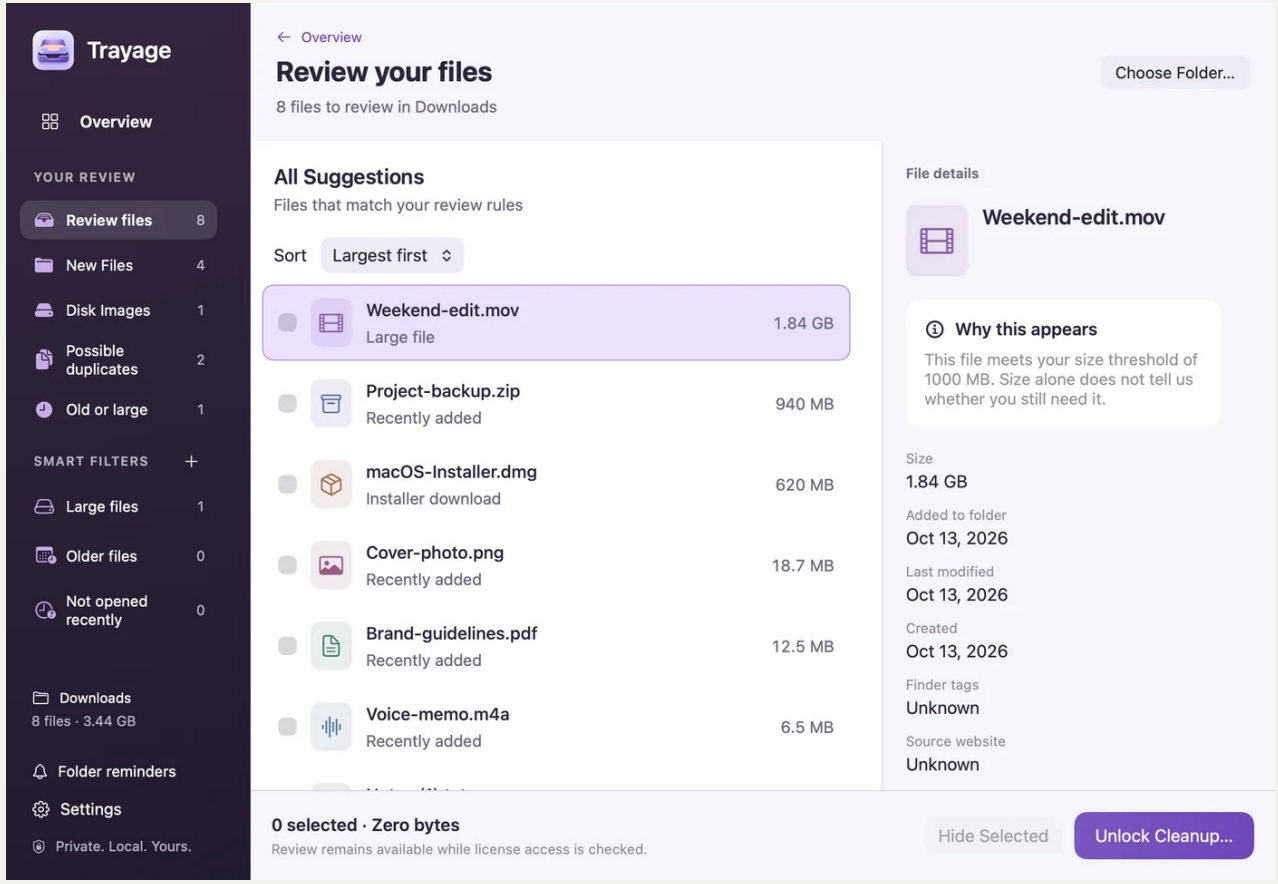

Installers, possible duplicates and older files, with reasons.

You choose what moves

Confirm Move to Trash.
Trayage never empties Trash.

US$9.99 once (direct)

Free review · 7-day cleanup trial · No automatic charge

Two more focused products

Drift

Available · Chrome extension

Selected passage + page title + link → editable Mastodon draft.

Free and open source.
No Mastodon password or API token needed.

StylePort

Available · Safari on macOS 14+

Install, edit and manage CSS and UserCSS, with settings kept locally.

Free and open source.
Direct download + Mac App Store.

What’s Next

Building thoughtful tools for everyday digital life.

Continue improving existing apps based on real user feedback.

Explore new ideas that simplify everyday workflows.

Build sustainable, independent software with privacy and user control in mind.

Connect with users and collaborators to shape what comes next.

A studio of one
